

(Title)- Brighten up your workplace with the Lightway Maximus 5000

Designed with large commercial buildings in mind, the Lightway Maximus 5000 is a quick and easy way of enhancing the look and feel of applications such as warehouses, industrial halls and sales areas. This ultra-modern sun tunnel can provide a multitude of benefits for building and workers alike as the incoming natural sunlight brightens up the workplace at the same time as boosting performance levels of employees.

Ideal insulation

The Lightway Maximus 5000 contains an integrated thermal block Lightway Blue Performance 0.7 W/m²K, allowing complete control of the temperature- extremely practical for the winter months when it is preferable to trap the heat inside. Similarly, the Maximus 5000 works well in the summer as the internal spaces will not be heated and will not allow transmission of infrared light.

Hidden benefits

While the benefits of working in a space lit up by 85,000 lumens will be instantly clear to staff, the added health bonuses of the Lightway Maximus 5000 should not be ignored. Unlike artificial lighting, Lightway's provision of healthy daylight can result in lower frequency of illness, increased concentration and healthier eyes.

Easy Installation

With a 1246mm diameter and 1159mm sun tube, the Lightway Maximus 5000 is simple to set up and should take no longer than 15 minutes per set. No specific training or specialist company is needed to install it, you just need the manual.

More for your money

To light a 10 000m² hall, 50 sets of Lightway Maximus 5000 are necessary. This replaces 350 electric LED lights, with an output of 350 x 144W. Therefore, halls can be lit for free, with a return investment of only five years.

Accessories

To help accommodate all types of flat roof buildings, various lengths of roof sleeve extensions and extension tubes are available to be purchased with the product. The Lightway Maximus 5000 is already compatible with every type of roof material.
