

What is a window cill?

The external window cill forms a protruding lip that directs water away from the brickwork.

Window cills are available in 3 sizes – 85mm, 150mm (standard) and 180mm.

All cills are 30mm high, this height will be included in the overall window height

The 30mm height of the cill is included in your overall window height.

Ensure that you have clearance from the brickwork.

You do not have to have an external cill. For example, you may have a stone cill and do not want an additional uPVC one.
